

Crave
JUMP RAMPS

GO CREATE

Born in 1984 under the concept **A rough thing that works®**.
Deeply rooted in the Italian skateboarding history. Strong and lightweight.
Designed to break down the walls and to create new lines.
It worked in 1984 and still does today.

WHY WOOD

Wood is what we have used since the early 80's to build our halfpipes and skateboards.

We use this natural element to contrast the plastic triangles seen around.

Wood is elastic and offers more flexibility for higher jumps.

Graw Jump Ramps are made of pure plywood, light, easy to move and beloved by all creative people.

Graw Jump Ramp are the only real kickers of your jumping life.

GET A JUMP

G PRO SERIES

THE HEAVY-DUTY PROFESSIONAL JUMP RAMPS

The strongest, most heavy and prestigious Graw Jump Ramps. All models of the G PRO Series are made of 100% curved beech plywood with 20 mm of thickness. These jump ramps are super tough for frequent use by professionals, in skate-parks or scooter schools. All G PRO models come with a metal plate to be screwed on, with a hexagonal key and screws all included. Installation instructions are included for the fast assembly. The rubber pads help to keep the ramps steady under any circumstance.

SPECIFICATIONS

SPECIFICATIONS			G35 PRO	G20 PRO
DIMENSIONS	height (H)	cm (in)	35 (13.8)	20 (7.9)
	length (L)	cm (in)	113 (44.5)	80 (31.5)
	width (W)		50 (19.7)	
WEIGHT	kg (lb)	12 (26.5)	7.3 (16.1)	
WOOD	100% beech wood - thickness of 20 mm (0.87 in)			
ASSEMBLY	fast assembly - rubber pads, metal plate, screws included			

G SERIES

THE TRADITIONAL JUMP RAMPS

The G Series are the traditional Graw jump ramps, sold worldwide since the early beginnings. With the same dimensions of the professional models, these portable kicker devices are made of birch and poplar with 20 mm of thickness. Tough design for jumps with skate, bikes, boards, RC models and more. Strong and lightweight, they are easily transportable by hand and also fit in any trunk. The units are delivered with the metal plate, a hexagonal key and screws, for the easy and fast assembly. The rubber pads on the short, steep side guarantee stability on uneven surface and keep the ramps firm to the ground.

SPECIFICATIONS

			G35	G20
DIMENSIONS	height (H)	cm (in)	35 (13.8)	20 (7.9)
	length (L)	cm (in)	112 (44)	76 (29.9)
	width (W)		50 (19.7)

J SERIES

LIGHT-WEIGHT STRONG KICKERS

The J Series jump ramps are small in size but strong at heart. Available in three different heights, all J Series models are made of 100% beech wood with 15 mm of thickness. No metal plate or assembly is needed for these jump ramps which are extremely light in weight, 4 kg maximum. The rubber pads provide maximum stability under any circumstance.

SPECIFICATIONS

			J25	J20	J15
DIMENSIONS	height (H)	cm (in)	25 (9.8)	20 (7.9)	15 (5.9)
	length (L)	cm (in)	85 (33.5)	76 (29.9)	65 (25.6)
	width (W)		40 (15.7)		
WEIGHT		kg (lb)	4 (8.8)	3.5 (7.7)	3 (6.6)
WOOD			100% beech wood - thickness of 15 mm (0.59 in)		
ASSEMBLY			pre-mounted metal plate - no assembly is needed		

G WAVE SERIES

ACTION WITHOUT LIMITS

Available on request, Graw designs your own wave for no-limit actions. The G Wave Series is based on the G PRO jump ramps. The units can be easily assembled according to your width needs. Fast and easy to assemble, it takes just few minutes to build a portable wave. Ask for your own Graw Wave package now.
